

2009 PreAP Harmonic Motion 1

Harmonic Motion: Yes or No?		1. Period 2. Equilibrium position 3. Amplitude 4. Damping 5. Frequency 6. Cycle 7. Hertz	A. The number of cycles per second. B. A unit of one cycle per second. C. The size or strength of a cycle. D. Time it takes to complete one cycle. E. A part of motion that repeats over and over with a set series of events. F. Halfway between the two sides and where the motion comes to rest. G. The motion dying out over time.
Pendulum: _____	A bouncing ball: _____		
Ocean waves: _____	A ruler pulled from one side and released: _____		
A child on a swing: _____	A person jumping up and down: _____		
Jumping Jacks: _____	A spinning ball: _____		
Bouncing spring: _____			

Period, Frequency, or Amplitude?

Doesn't change period.
 More of this means more energy.
 Increases as a pendulum swings back and forth faster.
 Measured in cycles per second.
 Measured in meters or centimeters.
 This decreases with a smaller swing.
 If the frequency increases, this decreases.
 Measured in Hertz.
 Measured in seconds.
 If it swings back and forth slower, this decreases.
 As it dampens, this decreases.

Where is the equilibrium position for this pendulum?

If the pendulum starts at C going to the right, where does 1 cycle end?

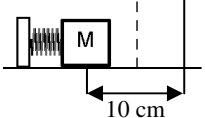

From letter A to letter ____ would be the amplitude.

If the pendulum starts at A, how many times does it pass point C in 1 cycle?

A moving spring Where is its equilibrium position?

A.  If the spring starts at position A, how much of a cycle does it complete from A to C?

B.  _____

C.  If the spring moves 10 cm from C to A (side to side), how big is its amplitude?

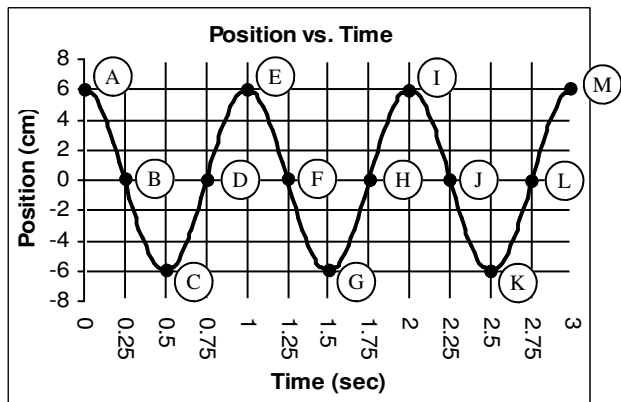

10 cm

An spring has a period of 4 seconds. What is its frequency?

A pendulum has a frequency of 3 Hz. What is its period?

A pendulum takes 10 seconds to complete 2 cycles.

A) What is its period?
 B) What is its frequency?

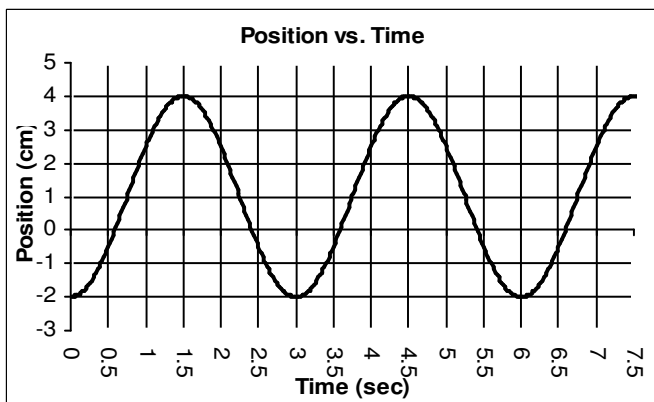

1 cycle after A is ____; 2 cycles after D is ____.

1/2 cycle after G is ____; 1/4 cycle before M is ____.

of complete cycles shown is ____.

Period (T) = Frequency (f) =

Equilibrium position = Amplitude (A) =

Mark 1 cycle of the harmonic motion.

Starting at 1.5 secs, when does the 2nd cycle end:

Number of cycles shown is ____.

Period (T) = Frequency (f) =

Equilibrium position = Amplitude (A) =

1. Give the variables and units for the following quantities:
A. Period: _____; B. Amplitude: _____; C. Frequency: _____; D. Wavelength: _____
2. If the period of a pendulum is 4 seconds, find the frequency of the pendulum.

Speed of a wave equation: $V = f\lambda$, where λ is the wavelength.
3. If the frequency of a wave is 1.35 Hz, find its period.
4. If the frequency of a wave is 0.02 Hz, find its period.
5. If the frequency gets bigger, the period gets _____.
6. Find the period of a pendulum that is 80 inches long.
7. What is the period of a spring-mass system if the spring has a spring constant of 25 N/m with a 1.5 kg object on it.
(*Make sure to use the spring-mass system equation—not the one for a pendulum.*)
