

A-Day: Due Thurs., Oct 18 (Assigned: 10/16)

B-Day: Due Fri., Oct 19 (Assigned: 10/17)

## Two Dimensions 8

1. A cow bird is eating ticks off of a cow when it is spooked by a passing car. The bird flies off starting at 2 m/s at an angle of  $20^\circ$  to the ground. The bird accelerates  $1.2 \text{ m/s}^2$  for 4 seconds.
  - A. The cow is aided by the removal of the tic. This relationship between the bird and cow is an example of:
  - B. Find how much altitude the bird gains. (*Remember that altitude is vertical distance.*)  
(*You might want to find how far the bird flew at  $20^\circ$ , first.*)

- C. If the cow is 1.4 meters high, how high is the bird up in the air (*total—from the ground*)?  
*[Remember that the bird started on the cow.]*

2. A ball is thrown from the ground at 25 m/s at  $45^\circ$  to the ground. Find how high up the ball goes.
  - A. Is “how high” in the x or y direction?
  - B. What two letters from our diagram is this?
  - C. Solve.

3. A bullet is fired horizontally from a gun aimed directly at a coconut dropped from a tree 5 meters away. The coconut is at the exact same height as the gun and drops at the exact same time the bullet is fired.
  - A. Thinking about my demonstration of throwing a ball and dropping a ball at the same time. What is the initial y-velocity of both the coconut and the bullet?
  - B. What is the y-direction acceleration for both the bullet and the coconut?
  - C. Will the bullet hit the coconut?
  - C. Why or why not?

4. A submarine surfaces to fire its 5 in guns at an enemy ship that is 550 m away. The sub's gun fires its projectile at 70 m/s at an angle of  $35^\circ$ . Will they hit the enemy be destroyed? (*Assume both the sub fires and the enemy ship are at sea level.*)

More on back

Two Dimensions 8

5. What is the resultant of  $E + 2D + H + A$ ?

6. Draw the resultant of  $2A - B + G$ .

7. A person walks 6 m north, 10 m east, 7 m south, 4 m west, and another 8 m north. Find the total displacement of the person (magnitude and direction). (*Remember that displacement is how far they move from their original position.*)
